Pictured above is one of M3 Cranes many Rough Terrain Cranes which range from 35 to 100 Tons.

The Tadano TR450XL-4 is shown being lowered into the World Trade Center Transit Hub Project. The 45 Ton Rough Terrain will be utilized on the foundation work for the project, handling re-bar, formwork, concrete and whatever hoisting is necessary for the project.

In NYC the environmental criteria for cranes is rather stringent. This Rough Terrain along with most in our fleet is equipped with a special DPF filtering system which removes up to 85% of diesel particulate matter from the exhaust of a diesel engine.
